

Cat and dog detection

Note: The esp32 camera needs to be burned with factory firmware. If you have not flashed the firmware after receiving the esp32 camera, it is not necessary. The factory default firmware, before using iic communication, you can use the serial port to configure the network for the esp32 camera, and iic is used for data reading

1. Experimental preparation

- One arduino board
- One esp32 camera

2. Wiring diagram

ARDUINO	esp32 camera
SDA	SDA
SCL	SCL
GND	GND
5V	5V

Actual wiring diagram:

3. Experimental steps and experimental results

1. Connect the Arduino device to the ArduinoIDE compilation platform. If you can see the serial port number, it is normal.

2. In the .ino file, change it to the corresponding ai mode.

```

IIC_AI_Camera.ino esp32_wifi.cpp esp32_wifi.hpp
1 #include <Wire.h>
2 #include <stdio.h>
3 #include "esp32_wifi.hpp"
4
5 char send_buf[35]={0};
6
7 Model_state model = Cat_Dog_Model;
8

```

3. Click Compile and Download to download the program to the uno motherboard. If the download is successful, the following picture will appear

The screenshot shows the Arduino IDE interface. At the top, there's a toolbar with icons for file operations. Below it is a menu bar with 'File', 'Edit', 'Sketch', 'Tools' (which is highlighted with a red box), and 'Help'. The main area displays an 'Arduino Uno' board selected from a dropdown. A tab bar at the top shows 'IIC_AI_Camera.ino' as the active sketch, along with 'esp32_wifi.cpp' and 'esp32_wifi.hpp'. The code editor contains the following C++ code:

```
1 #include <Wire.h>
2 #include <stdio.h>
3 #include "esp32_wifi.hpp"
4
5 char send_buf[35]={0};
6
7 Model_state model = Cat_Dog_Model;
8
9
10 void setup()
11 {
12     Wire.begin();          // join i2c bus (address optional for master)
13     ESPWIFI.begin(115200);
14     set_ai_mode(model);
15 }
16
17
18 void loop()
19 {
20     deal_camera_data();
21 }
```

The 'Output' panel at the bottom shows the upload progress: 'Sketch uses 6292 bytes (19%) of program storage space. Maximum is 32256 bytes.' and 'Global variables use 524 bytes (2%) of dynamic memory, leaving 1524 bytes for local variables. Maximum is 2048 bytes.' A message 'Done uploading.' is displayed in a toast notification.

4. Open the uno ide serial port to view the data. x: 160, y: 120 are the default data.

```
Output Serial Monitor ×  
Message (Enter to send message to 'Arduino Uno' on 'COM'  
y: 120  
x: 160  
y: 120
```

5. Open the camera and connect to the hotspot released by esp32

Then enter <http://192.168.4.1:81/stream> through the browser to access the camera screen

6. Identify cats and dogs. If the recognition is successful, the current center coordinates will be printed out, and the cat image will be placed in front of the previous screen.

At the same time, the uno terminal will print out the current coordinates,

```
Output  Serial Monitor X
Message (Enter to send message to 'Arduino Uno' on 'COM22')
y: 116
x: 247
y: 113
x: 249
y: 111
x: 247
y: 111
x: 248
y: 110
x: 249
y: 116
x: 511
y: 98
x: 249
y: 104
x: 250
y: 108
x: 250
y: 106
x: 258
y: 109
```

Face recognition mode

When switching to face recognition mode,

```
Model_state model = Face_Detection;
```

Click compile and download, download the program to the uno motherboard, and the following picture will appear if the download is successful

```

face_recognition.ino esp32_wif.cpp esp32_wifi.hpp esp_key.cpp esp_key.hpp
35     sprintf(x, "x: %d",esp32_ai_msg.cx);
36     sprintf(y, "y: %d",esp32_ai_msg.cy);
37     ESPWIFISerial.println(x);
38     ESPWIFISerial.println(y);
39
40 // ESPWIFISerial.println(esp32_ai_msg.cx);
41 // ESPWIFISerial.println(esp32_ai_msg.cy);
42
43
44
45 void setup()
46 {
47     init_key(); //按键初始化
48     serial_init(); //串口初始化
49     SET_ESP_WIFI_MODE(); //设置wifi模式
50     SET_STA_WFTT();
51     SET_AP_WIFI();
52     SET_ESP_AI_MODE(AI_set_mode); //设置AI模式
53     delay(20);
54     Get_STAIP();
55     delay(20);
56     Get_APIP();
57     delay(20);
58
59
60     mode_change(); //根据模式选择启动数据方法
61 }
62

```

Output

```

Sketch uses 9942 bytes (30%) of program storage space. Maximum is 32256 bytes.
Global variables use 747 bytes (3%) of dynamic memory, leaving 1301 bytes for local variables. Maximum is 2048 bytes.

```

Open uno View data through the ide serial port, x: 160, y: 120, id: 0 is the default data.

```

x: 160
y: 120
id: 0

```

Recognize face. When you see a face, press the key button to record the face

The following picture appears, which means the recording is successful, and the face 1 is recorded

At this time, you can press and hold the button for two seconds, then release it and press the button again to recognize the current face

At the same time, the uno terminal will print out the current center coordinates and the recognized face.

```
Output - Serial Monitor X
Message (Enter to send message to 'Arduino Uno' on 'COM22')
a: 100
y: 125
id: 1
x: 186
y: 125
id: 1
8
```

Color detection mode

When switching to color detection mode,

Click Compile and Download, download the program to the uno motherboard, and the following picture will appear if the download is successful

```
face_detect_esp32.ino esp32_wifi.cpp esp32_wifi.hpp esp_key.cpp esp_key.hpp
35     sprintf(x, "x: %d",esp32_ai_msg.cx);
36     sprintf(y, "y: %d",esp32_ai_msg.cy);
37     ESPWIFISerial.println(x);
38     ESPWIFISerial.println(y);
39
40 // ESPWIFISerial.println(esp32_ai_msg.cx);
41 // ESPWIFISerial.println(esp32_ai_msg.cy);
42
43
44
45 void setup()
46 {
47     init_key(); //按键初始化
48     serial_init(); //串口初始化
49     SET_ESP_WIFI_MODE(); //设置wifi模式
50     SET_STA_WFTT();
51     SET_AP_WIFI();
52     SET_ESP_AI_MODE(AI_set_mode); //设置AI模式
53     delay(20);
54     Get_STAIP();
55     delay(20);
56     Get_APIP();
57     delay(20);
58
59
60     mode_change(); //根据模式选择启动数据方法
61 }

```

Identify the color. Press the button and a box will appear. You can use this box to select the color you want to use.

Press and hold the button for two seconds, release it and press it again to identify the color currently selected. At the same time, a red box appears,

At the same time, the uno terminal will print out the current coordinates,

```
